Sample Questions and Model Marked Answers from October November 2012

Question 1: Describe the structure of a typical plant cell. (3 marks)

Sample Answer:

A typical plant cell has a cell wall made of cellulose, a cell membrane, a nucleus that controls cell activities, cytoplasm where chemical reactions occur, chloroplasts for photosynthesis, and a large central vacuole filled with cell sap. (Full marks awarded for mentioning all key components with brief descriptions).

Question 2: Explain how enzymes work to speed up chemical reactions. (4 marks)

Sample Answer:

Enzymes are biological catalysts that lower the activation energy needed for reactions to occur. They work by binding to the substrate at the active site, forming an enzyme-substrate complex. This speeds up the reaction, and the enzyme is unchanged at the end. Factors like temperature and pH can affect enzyme activity. (Full marks for covering binding, lowering activation energy, and the effect of environmental conditions).
